

## What is RPA?

RPA stands for **Robotic Process Automation**.

It is a technology that uses software robots or bots to automate repetitive and rule-based tasks within business processes. RPA bots mimic human interactions with digital systems and applications to perform tasks such as data entry, data manipulation, system integration, and more.

## RPA Tools

RPA tools are software platforms or frameworks that enable the development, deployment, and management of RPA bots. These tools provide a visual interface for designing and configuring automation workflows, as well as features for bot deployment, scheduling, monitoring, and error handling.

**Some popular RPA tools include:**

**UiPath:** UiPath is one of the leading RPA platforms. It offers a comprehensive set of tools for designing, deploying, and managing RPA bots. UiPath Studio provides a visual interface for building automation workflows, and UiPath Orchestrator helps manage and monitor bot deployments.

**Automation Anywhere:** Automation Anywhere is another popular RPA tool that offers features for designing and deploying bots. It provides a drag-and-drop interface for building automation workflows, as well as a centralized control room for bot management and monitoring.

**Blue Prism:** Blue Prism is an enterprise-grade RPA platform known for its scalability and security features. It offers a visual design environment for creating automation workflows and provides centralized control and management capabilities.

**Microsoft Power Automate:** Microsoft Power Automate (formerly known as Microsoft Flow) is a cloud-based automation platform that integrates with various Microsoft tools and services. It offers a user-friendly interface for building automation workflows and supports integration with other applications and services.

**Pega Platform:** Pega Platform is an intelligent automation platform that combines RPA with other capabilities like case management and business process management. It provides a visual interface for designing and deploying bots within larger business processes.

**Kofax:** Kofax provides an RPA tool called Kofax RPA, which offers features for automating repetitive tasks and integrating systems. It includes a visual workflow designer, bot management capabilities, and integration with other Kofax products.
